DETAILED ACTION

Drawings

1. The drawings are objected to because the details of the applicant's invention, namely the spring elements connected directly to the frame, cannot be clearly seen since the drawings are too small to make out details. A close-up of the claimed structure should be shown. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The title of the invention is too generic to be descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

3. Claims are objected to because of the following informalities:

(i) Regarding claim 7, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d). Also, the phrase "suitable for molding" is indefinite because no criteria or test has been recited that would define between a material that is "suitable" and one that is not.

(ii) Regarding claim 8, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(c). Description of examples and preferences is properly set forth in the specification rather than in a single claim. A narrower range or preferred embodiment may also be set forth in another independent claim or in a dependent claim. If stated in a single claim, examples and preferences lead to confusion over the intended scope of the claim.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morinaka in view of Howard. Morinaka discloses the claimed invention except the support springs (9) of the vibrating conveyors are attached to an intermediate frame (7) which is vibrationally isolated from the machine frame by springs (6a,6b) instead of being connected directly to the machine frame itself. However, it is an art recognized alternative to mount the support springs of the vibrating conveyor directly to the frame of the industrial machine that it is a part of (Col. 3, lines 25-36). The motive for so doing would be to reduce the complexity and cost of assembling the machine by reducing the number of parts.
